

GELITA TUFT-IT®

Take it easy!

The product has been designed according to essential requirements for a hemostat in (visceral) surgery:

Excellent Time to Hemostasis

Cost efficiency combined with high performance and safety

Adaptation to the various surface conditions and high elasticity and flexibility with an excellent ability to reposition the product after application

Optimal contact to oozing bleeding surgery sites, even in difficult to reach areas or on irregular surfaces, optimal adherence to bleeding sites

GELITA TUFT-IT® stays intact even when fully saturated and is resistant to rinsing during procedures

Moreover the first scientific evaluations of this novel gelatin based material indicate to have less impact on the deep wound healing processes compared to frequently used oxidized (regenerated) cellulose hemostatic products.

We kindly invite you to the “Früh-Seminar” on 27th of March, organized by GELITA MEDICAL GmbH at the 136th Congress of the German Society for Surgery 2019 <http://chirurgie2019.de/> in Munich.

The topic of the seminar is sharing experiences made with the innovative hemostatic product named GELITA TUFT-IT®, the world’s first absorbable non-woven gelatin hemostat.

GELITA MEDICAL and its partner in Germany, ASID BONZ will be available at the stand 254 in Hall B0 to answer your specific questions.

We kindly invite you to attend the seminar in Munich on the 27th of March between 7.30 and 8.30 a.m. in congress room 2, program on verso.
